
SMP Player System Recovery

Posted by Marco Tran - 2008/06/15 08:38

Oh no!!! If you encounter any unrecoverable problems (e.g. unable to boot up) while using SMP client, you can choose this function, "System Recovery", to restore your system firmware to the factory defaults.

Simply follow the steps below to recover the system:

1. Start or Restart the SMP system with keyboard connected to the device.
2. Keep press the TAB key while power on until the boot loader menu appear (cayinos & recovery).
3. Enter "recovery", and press "enter". If you want to recover the system without answering questions, you can enter "recovery automatic". The program will skip step 5 & 6.
4. While the recovery system boots up, follow the instructions.
5. When the instruction "The system will recover to factory default." is shown, please type "Y". Then the system firmware will be restored to the original one, i.e. you have to upload all patches again after the system recovery.
6. When the instruction "The configuration will recover to factory default." is shown, you can choose to type "Y" and SMP will restore the configuration to the original one. You will lose all configurations which you made on this box, and you will be prompt to enter a new key for this box when you restart the system again. The key label is stuck behind the SMP device.
